NOTIFICATION

Vektra® Notification is a software application that enables operators immediate automated telephoning and sending short messages (SMS) to pre-defined recipients. The application is used in emergency situations to summon emergency units and rescue teams (first responders). Moreover, it finds its effective utilisation in ordinary non-emergency summons and notification of a greater number of people. With the concurrent use of the **Vektra® SCADA** software application, notification can be activated automatically based on a changing state of monitored values.

Main functions

Automated telephoning and sending short messages (SMS) to pre-defined recipients

Unlimited number of recipients, groups of recipients, and emergencies

Prioritisation of recipients of notifications (phone calls and SMS)

Automated repetition of notification and summons of unavailable recipients

Multi-lingual notification with a specific language definition for a specific recipient

Keeping records and storage of all information on events in the Vektra® database

- o Name of a person running an event
- o Title of an event and text of a short message sent
- o Date and time of running/stopping an event
- o Method of notification (a phone call and/or message)
- o Response to a notification call and/or message from all persons to be notified

Advanced notification settings

- Setting a list of events for notification purposes
- A pre-defined list of recipients to be notified in a particular event
- A pre-defined list of messages to be sent during a particular event
- Setting a method of notification (a phone call and/or message)
- Setting a language of notification
- Defining a method of confirmation of receipt of short messages
- Setting the number of repetitive notifications in the event of non-responding to the previously sent notification message
- Automated consideration of availability of notified persons during the day

Software Application for Immediate Automated Notification and Summons

Vektra®

Vektra® is a server-client based system of modern software applications that enable operators to control acoustic warning devices, manage rescue and emergency operations automatically, summon task forces, rescue and emergency staff meetings and that keep the emergency management under control and automate the management of processes during the rescue and emergency operations.

Vektra® system applications

- **Vektra® Warning**
- **Vektra® Notification**
- **Vektra® SCADA**
- **Vektra® Emergency & Rescue Management**

As standard, the individual applications are procured and supplied independently, depending on client needs; however, they are designed in the way to be easily interconnected to form a whole single system.

The **Vektra®** software is fully adjustable to suit any client requirements. It allows system control at various levels, based on a pre-defined hierarchy of the emergency management structure, while each user can be granted permission to control specific devices at a specific level.

Fields of applications

Dams

Ministries

Industrial
Plants

Banks and
Insurance Companies
