

# Pavian Portable

telegrafia®

**Warning: wherever  
currently needed**

**Warn anywhere: Pavian Portable will be your  
reliable guardian in every corner of the world**

Enter a new era of mobile warning with our portable electronic siren that revolutionises public protection. This innovative system provides a reliable warning mechanism, easy portability, superior efficiency, and flexibility while maintaining all the features of the Pavian intelligent electronic siren. Secure **remote areas** without a warning system, **regions affected by the natural elements**, or even **quickly replace a damaged siren**. Take control of danger wherever needed and take the first step towards a safer future!

 **Pavian®** Portable

# Forget limitations and find solutions

Terrain, with its ruggedness, is no longer an issue. Time remains the only crucial variable that can affect warning effectiveness. By removing the barriers to rapid information and warning, the Pavian Portable siren finds its application in a wide range of industries and becomes the solution to many situations.

## Warning in the fight against torrential rains and landslides

In such a battle, the mobile siren becomes an invaluable ally on the disaster prevention front. The instant warning signal alerts residents to potential hazards, enabling them to evacuate the affected area quickly and allowing rescue teams to respond immediately. The Pavian Portable features a rugged IP66-rated steel box, making it ideal for use against the water element and its pitfalls. It thus plays a significant role in minimising damage and protecting lives and property.

## Pavian Portable – the only portable electronic siren of its kind

## Dissemination of information as fire spreads

With its portability and comprehensive acoustic coverage, the Pavian Portable siren becomes a vital tool in ensuring safety in extreme weather conditions. Moisture, dust, water, cold, or heat are all environments where the full siren operation is not compromised on any account. Local or spreading forest fires are no exception. The advantage is that the siren can be installed without a tripod by attaching it to a tree with a suspension hook.

## Acoustic coverage of quarries and open-cast mines

The Pavian Portable siren is also used in quarries and open-cast mines as a safety precaution and an early warning in case of danger. The penetrating and distinctive signal, or the clarity of the spoken announcement, allows field workers to be immediately alerted to potential hazards, thus helping to prevent dangerous situations. Its mobility and portability make it an effective safety tool in mining operations, supporting a rapid and coordinated response to potential critical incidents.

## Safety on construction sites

Pavian Portable is a strategic solution on construction sites that contributes to safety, prevention, and immediate solutions to emergencies. Acoustically, it can easily cover large sites and can be suspended from beams or any fixed structure using a suspension hook. Pavian Portable's control options allow the siren to be operated on-site or from a central location via a control panel, which is essential for instant warning against potential hazards wherever needed. It is, therefore, a flexible tool for disseminating information and warnings that reach every employee outdoors and indoors.

## Information tool for mass events

The portable siren is also perfectly efficient in ensuring safety at mass events, where it serves as an essential tool for quick and clear warning of potential risks or delivery of organisational instructions. Its portability allows for easy deployment in various locations, providing reliable protection at events with large numbers of people, regardless of the event's location. The distinctive strength of the sound produced is sufficient to convey the necessary information or warning signal to a noisy crowd or even during musical events.
